

13b - Void Pointer

Monday, 17 August 2026

7:21 PM

We can supply any type of address here

We can not directly de-reference void pointer.

We can type cast, eg: `*(int *)p`

```
6  #include<stdio.h>
5
4  int main(){
3      int a = 7;
2      void *p;
1      p = &a;
7      printf("Integer variable is %d", *((int *)p));
1
2      return 0;
3  }
```
